

Psygraph

Four Tools:

- * A stopwatch to track meditation
- * A counter to track awareness and mindfulness of breath
- * A timer that delivers bells and quotes at preset or random times
- * A notetaker for text and audio notes that syncs with WordPress

Relevant to QS:

- * Open-source JavaScript
- * Runs on mobile devices and web
- * Not just for meditation: Measures arbitrary quantitative data
- * All data is downloadable via CSV

Future Directions:

Psygraph currently supports several BlueTooth devices such as heart rate meters. The next scheduled feature is an alarm that indicates when heart rate changes by 15%, since these deviations may indicate a significant psychological event (personal correspondence, Interdisciplinary Affective Science Laboratory, Northeastern University).
